

设 $A = \begin{pmatrix} 1 & 0 \\ \lambda & 1 \end{pmatrix}$, 求 A^k

(2016) 设矩阵 $A = \begin{pmatrix} 0 & -1 & 1 \\ 2 & -3 & 0 \\ 0 & 0 & 0 \end{pmatrix}$.

(I) 求 A^{99} ;

(II) 设 3 阶矩阵 $B = (a_1, a_2, a_3)$, 满足 $B^2 = BA$. 记 $B^{100} = (\beta_1, \beta_2, \beta_3)$, 将 $\beta_1, \beta_2, \beta_3$

分别表示为 a_1, a_2, a_3 的线性组合. a_1, a_2, a_3 .
